

# 简介

---

SonarQube(原名Sonar)是一个开源的代码质量管理体系,可以扫描项目中重复代码、编码标准、单元测试、代码覆盖率、代码复杂度、潜在Bug、注释等.

支持Java、C/C++、C#、PHP、Flex、Groovy、JavaScript、Python等多种语言.

代码扫描的好处在于通过配置规则扫描代码设计缺陷和代码优化从而提高代码的质量.

本文介绍使用docker技术搭建SonarQube环境并扫描代码.

## 环境搭建

---

### 快速启动

---

这种方式启动sonarqube是没有数据存储的,docker重新加载后数据不会reload数据.

```
docker run -d --name sonarqube -p 9000:9000 -p 9092:9092
sonarqube:lts
```

浏览器打开:0.0.0.0:9000  
帐号密码:admin、admin

使用docker logs查看是否启动成功

```
docker logs --tail=100
6a2bac9532c247fb85ff1b292709adff5d9cd107a1359ddd8344d63612b89ae7
```

### 插件挂载

---

sonar-l10n-zh-plugin-1.16.jar  
backelite-sonar-objective-c-plugin-0.6.3.jar

把jar包放到/Users/xinxi/Desktop/SonarQube/extensions/plugins目录下.

```
docker run -d --name sonarqube -p 9000:9000 -p 9092:9092  
-v  
/Users/xinxi/Desktop/SonarQube/extensions:/opt/sonarqube/extensions  
sonarqube:lts
```

## 全配置启动

### docker启动mysql

使用mysql作为数据存储,通过如下命令启动:

```
docker run --name mysql-5.6 -v /Users/xinxi/mysql:/var/lib/mysql -e  
MYSQL_ROOT_PASSWORD=123321  
-p 3306:3306 -d mysql:5.6
```

sonarqube不支持mysql5.5版本,最低支持5.6版本

```
018.12.03 05:44:55 INFO web[] [o.s.db.Database] Create JDBC data source for  
jdbc:mysql://192.168.129.25:5432/db_sonar?useUnicode=true&characterEncoding=utf-8  
018.12.03 05:44:55 ERROR web[] [o.s.s.p.Platform] Web server startup failed: Un  
supported mysql version: 5.5. Minimal supported version is 5.6.  
018.12.03 05:44:56 INFO app[] [o.s.a.SchedulerImpl] Process [web] is stopped  
018.12.03 05:44:56 WARN app[] [o.s.a.p.AbstractProcessMonitor] Process exited  
with exit value [es]: 143  
018.12.03 05:44:56 INFO app[] [o.s.a.SchedulerImpl] Process [es] is stopped  
018.12.03 05:44:56 INFO app[] [o.s.a.SchedulerImpl] SonarQube is stopped  
ogon:~ xinxi$ docker ps  
CONTAINER ID        IMAGE               COMMAND             CREATED  
STATUS              PORTS              NAMES
```

### docker启动sonarqube

需要注意两点:

- db\_sonar数据库需要手动先创建,否则会报找不到
- 本地搭建ip地址不能写localhost,需要写内网ip

启动命令如下:

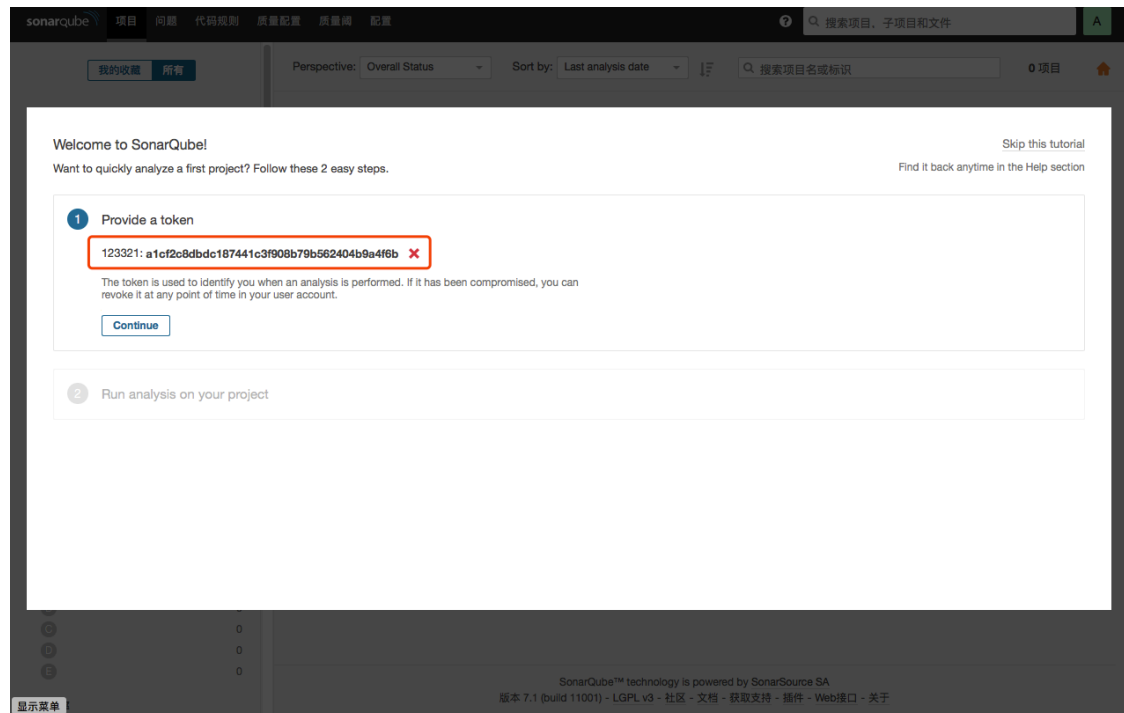

```
docker run -d --name Sonarqube -p 8185:9000 -p 8186:9092
-e "SONARQUBE_JDBC_USERNAME=root"
-e "SONARQUBE_JDBC_PASSWORD=123321"
-e "SONARQUBE_JDBC_URL=jdbc:mysql://192.168.1.109:3306
/db_sonar?useUnicode=true&characterEncoding=utf8"
-d sonarqube:lts
```

## docker-compose启动

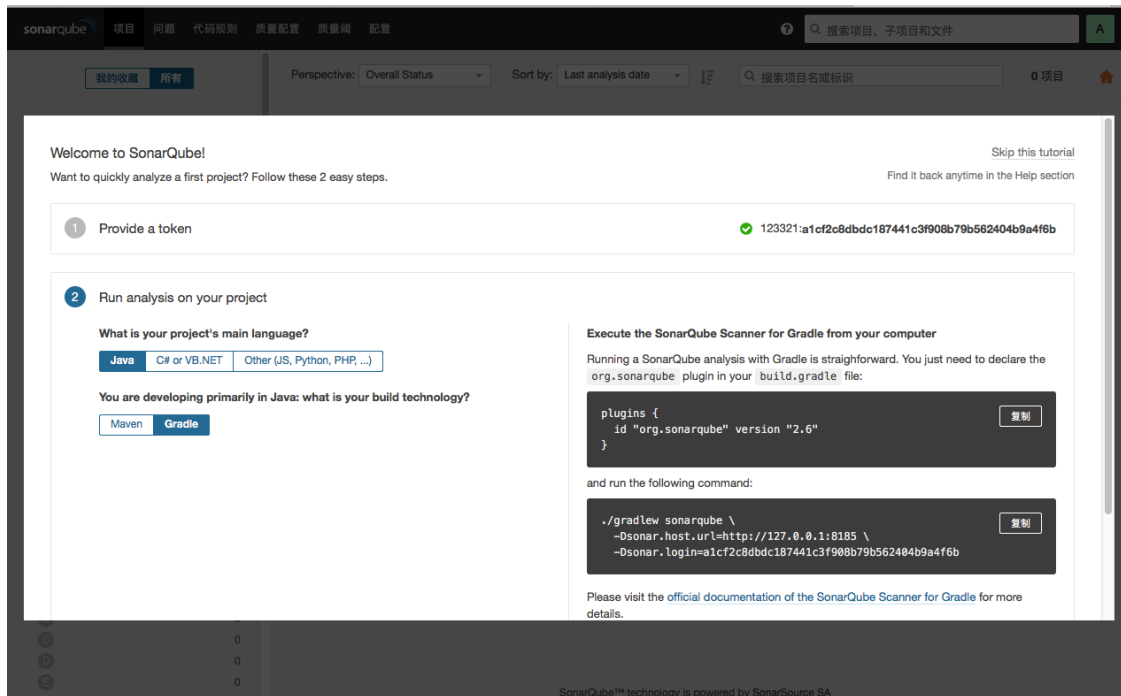

请参考:[https://github.com/xinxi1990/SonarQube\\_Docker](https://github.com/xinxi1990/SonarQube_Docker)

## 效果

启动成功以后,第一次页登录成功后会设置token,这个token是以后被扫描代码工程中需要配置的,用于通过token的方式连接Sonarqube平台传数据结果

# Android项目配置

项目地址:<https://github.com/xinxi1990/FakeBiliBili>

Android项目是使用gradle管理插件,所以需要配置gradle文件.  
在项目根目录的gradle配置如下:

```

buildscript {
    repositories {
        maven {
            url "https://plugins.gradle.org/m2/"
        }
    }
    dependencies {
        classpath "org.sonarsource.scanner.gradle:sonarqube-gradle-plugin:2.5"
    }
}

plugins {
    # 添加插件信息
    id "org.sonarqube" version "2.6-rc1"
}

apply plugin: "org.sonarqube"

```

参数介绍:

**Dsonar.host.url**:sonarqube的**ip**+端口  
**Dsonar.login**:sonarqube的**token**

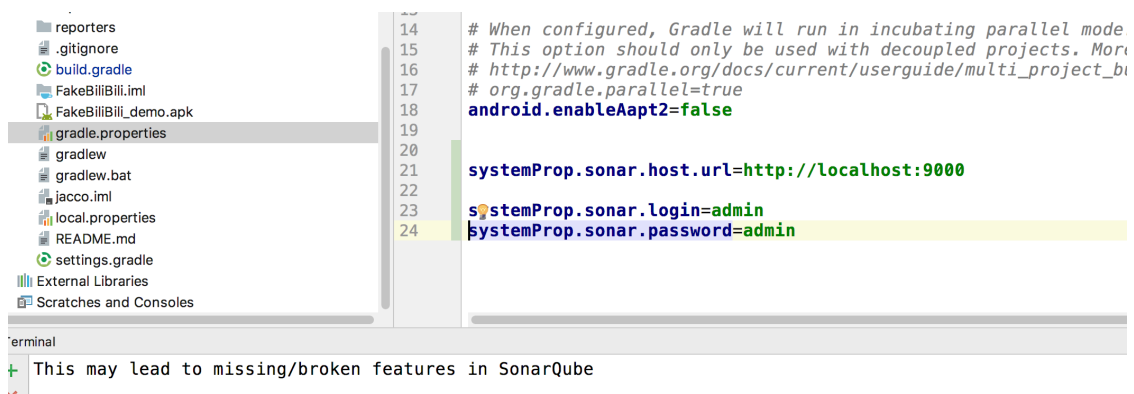

执行命令:

```

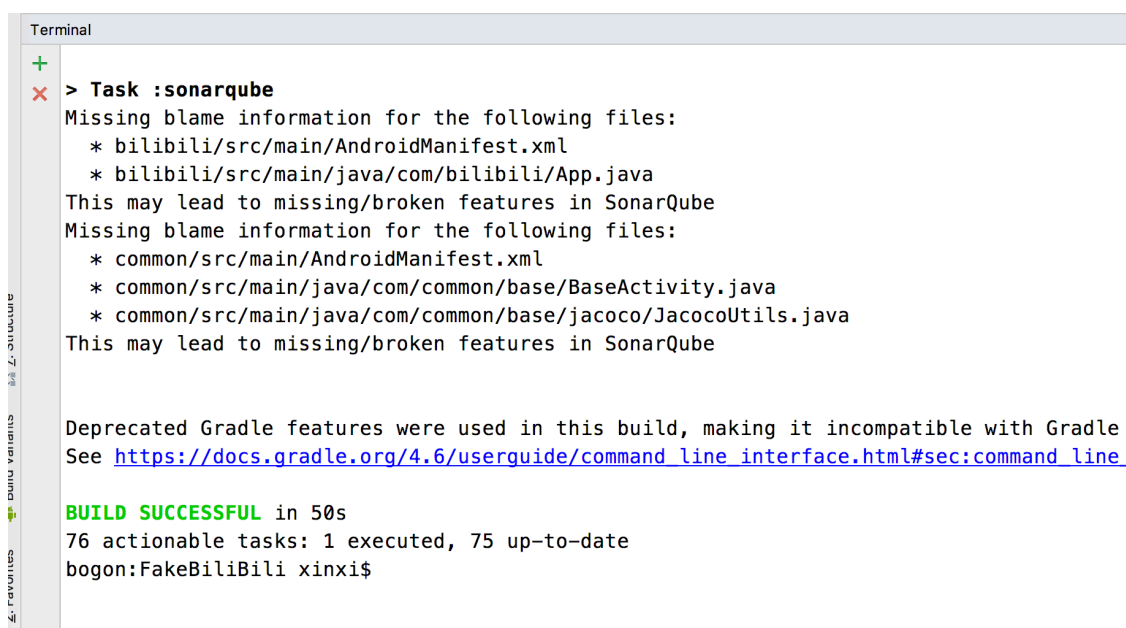

gradle sonarqube \
-Dsonar.host.url=http://localhost:8186 \
-Dsonar.login=a1cf2c8dbdc187441c3f908b79b562404b9a4f6b

```

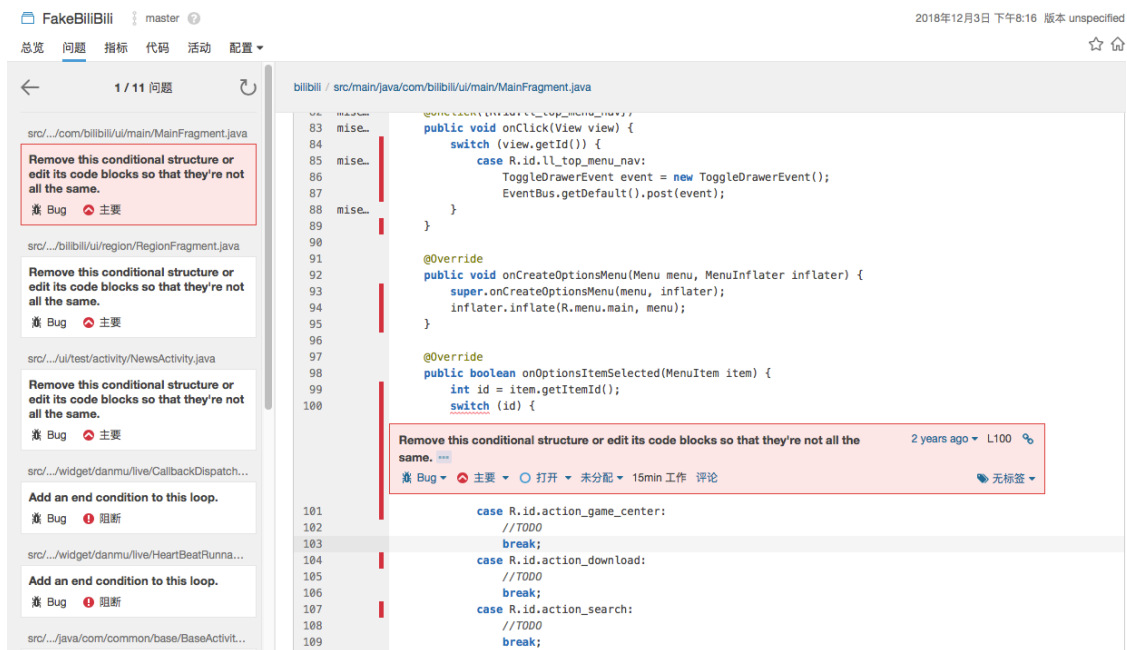

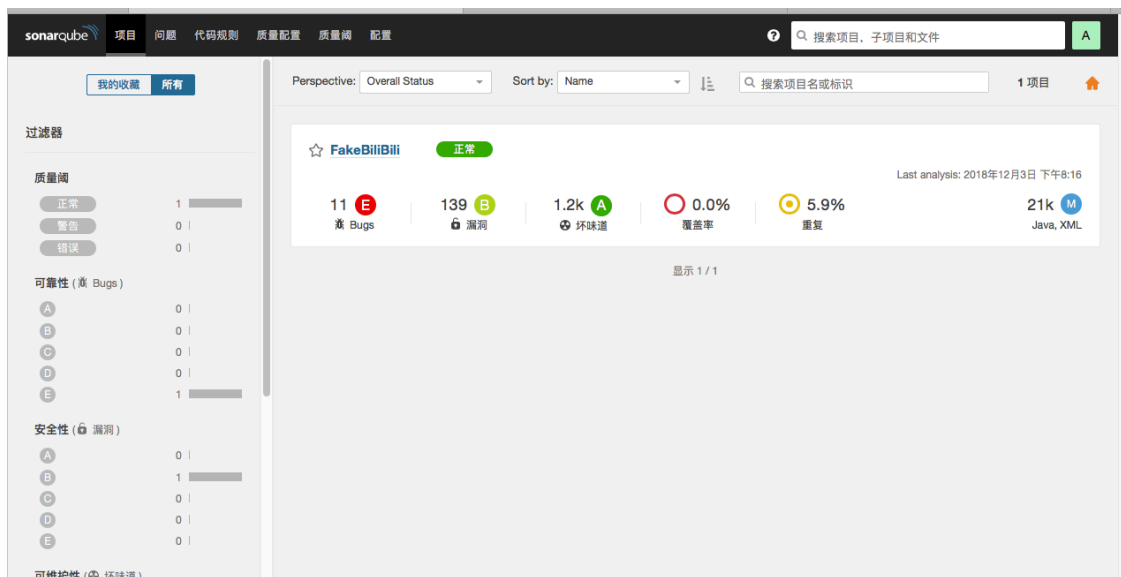

另外配置方式是在gradle.properties配置文件

上传结果成功

扫描结果

## mvn项目配置

项目地址:<https://github.com/xinxi1990/AppiumDemo>

## 运行命令

```
mvn sonar:sonar -Dsonar.host.url=http://localhost:9000 -Dsonar.login=c8ce928f1497f1fa5591cdcf5357aa4e44920796
```

## 扫描结果

```
[INFO] 14/16 files analyzed

```

The screenshot displays the SonarQube web interface for a project named 'webtest'. The top navigation bar includes 'Projects', 'Issues', 'Rules', 'Quality Profiles', and 'Quality Gates'. A search bar and a 'Log In' button are also present. The main header shows the project name 'webtest' and the version '1.0'. Below the header, there are tabs for 'Overview', 'Issues', 'Measures', 'Code', and 'Activity'. The 'Issues' tab is selected, showing a list of issues. On the left, there is a 'Filters' sidebar with 'Display Mode' set to 'Issues'. The 'Type' filter shows 'Bug' (2), 'Vulnerability' (12), and 'Code Smell' (59). The 'Severity' filter shows 'Blocker' (2), 'Critical' (1), 'Major' (19), 'Minor' (50), and 'Info' (1). The 'Resolution' filter shows 'Open' (1) and 'Not assigned' (1). The 'Status' filter shows 'Open' (1) and 'Not assigned' (1). The 'Creation Date' filter shows '10 days ago' (1). The 'Rule' filter shows 'convention' (1). The 'Tag' filter shows 'cert' (1) and 'cwe' (1). The 'Module' filter shows 'cert' (1) and 'cwe' (1). The 'Directory' filter shows 'cert' (1) and 'cwe' (1). The 'File' filter shows 'cert' (1) and 'cwe' (1). The 'Assignee' filter shows 'cert' (1) and 'cwe' (1). The main content area shows a list of issues for the file 'src/main/java/com/space/Application.java'. The issues are: 'Rename this field "WEB" to match the regular expression ^[a-z][a-zA-Z0-9]\*\$', 'Make this "public static WEB" field final', 'Make WEB a static final constant or non-public and provide accessors if needed.', 'Rename this field "REPORTPATH" to match the regular expression ^[a-z][a-zA-Z0-9]\*\$', 'Make this "public static REPORTPATH" field final', 'Make REPORTPATH a static final constant or non-public and provide accessors if needed.', 'Rename this field "CHROMEPATH" to match the regular expression ^[a-z][a-zA-Z0-9]\*\$', 'Make this "public static CHROMEPATH" field final', and 'Make CHROMEPATH a static final constant or non-public and provide accessors if needed.'.

## ios项目配置

## 安装

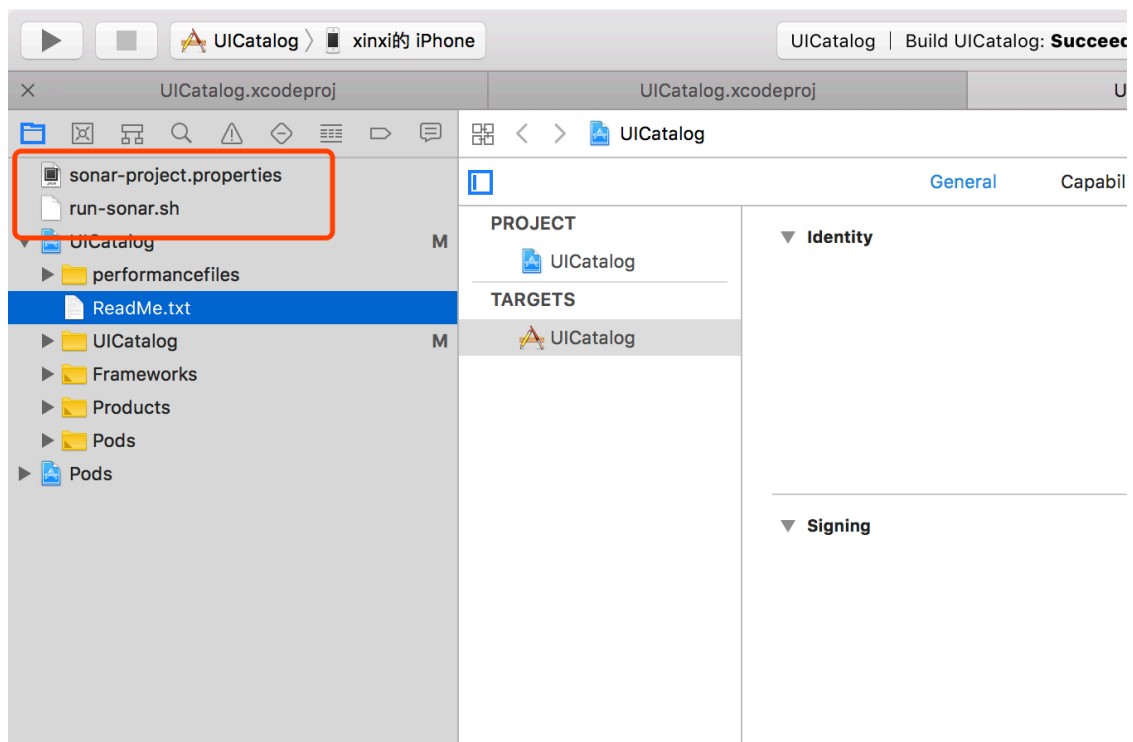

先需要安装如下工具

```
brew tap oclint/formulae
brew install oclint
brew install sonar-scanner
brew install gcovr
```

## 项目配置

需要在项目根目录增加run-sonar.sh和sonar-project.properties两个文件

具体配置请参考[Demo代码](#)

## 运行命令

在项目根目录下, sh **run-sonar.sh**

# 踩坑

---

提示没有oc插件

```
INFO: Load quality profiles

ERROR: Re-run SonarQube Scanner using the -X switch to enable full debug logging.
xinxiMacBook-Pro:ios-uicatalog xinxi$
```

通过sonarqube安装的oc插件是收费的,下载免费的oc插件.

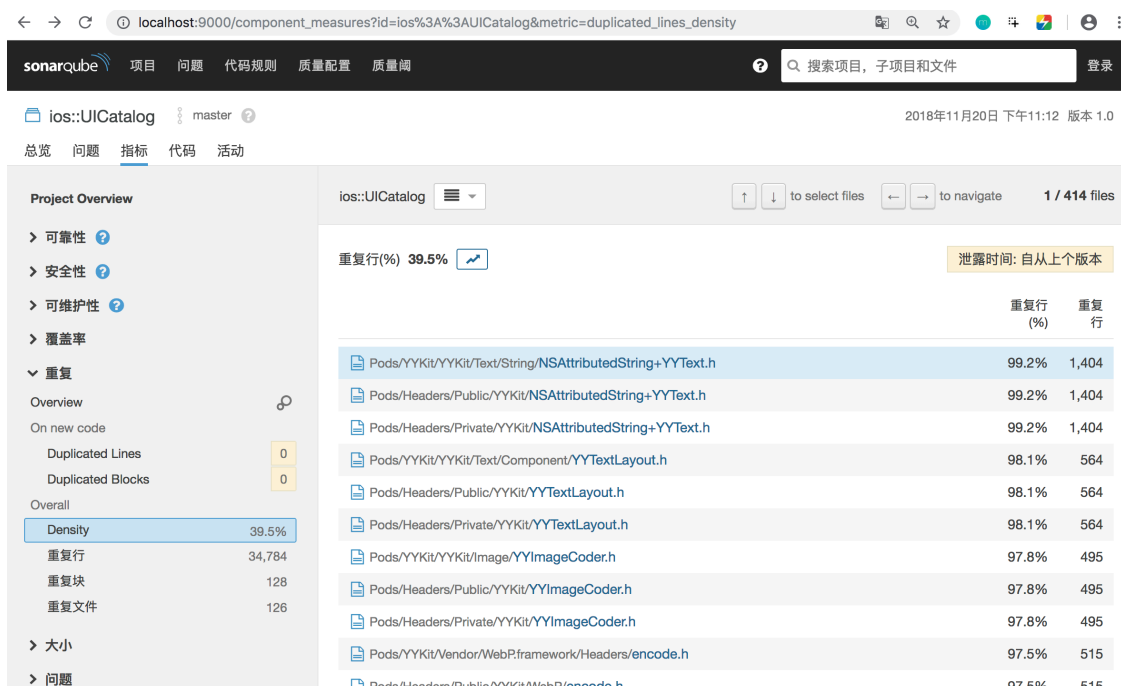

<https://github.com/Backelite/sonar-objective-c>

然后把backelite-sonar-objective-c-plugin-0.6.3.jar放到sonarqube的  
extensions/plugins中,然后重启镜像.

## 效果展示

Password:
```

## 制作镜像

sonarqube原生不支持中文、并且没有oc插件.可以把汉化中文包和oc插件打包成新的docker镜像

把sonar-l10n-zh-plugin-1.16.jar、backelite-sonar-objective-c-plugin-0.6.3.jar和dockerfile放到一个目录下

dockerfile如下:

```
dockfile:
FROM sonarqube
ADD sonar-l10n-zh-plugin-1.16.jar
/opt/sonarqube/extensions/plugins/
ADD backelite-sonar-objective-c-plugin-0.6.3.jar
/opt/sonarqube/extensions/plugins/
```

执行:docker build -t sonarqube:zh .

## jenkins持续集成

使用Android项目为例,首先需要在Jenkins中安装sonarqube插件,然后在系统设置中配置SonarQube的servers地址

全局属性

☐ 工具位置

☐ 环境变量

SonarQube servers

Environment variables

☐ Enable injection of SonarQube server configuration as build environment variables

If checked, job administrators will be able to inject a SonarQube server configuration as environment variables in the build.

SonarQube installations

Name

localhost\_sonar

Server URL

http://localhost:8185/

Server authentication token

.....

Default is http://localhost:9000

SonarQube authentication token. Mandatory when anonymous access is disabled.

高级...

Delete SonarQube

新建job并配置git地址

Git

Repositories

Repository URL

https://github.com/xinxi1990/AndroidDemo.git

Credentials
